EXCITING NEW TECHNOLOGY MAKES YOUR DENTAL WORK EASIER AND BETTER – WHERE CEREC STANDS TODAY

CEREC was developed at Zurich University with German engineers and used in dental offices since 1985. It is used world wide in 50 countries and 25,000 practices. Long term studies are better than or at least equivalent to gold restorations.

There is no more impressions, temporaries and waiting periods; After numbing, decayed and defective amalgam fillings are removed, 3D image is taken with OmniCam camera, restoration is designed and milled out of a ceramic or composite block. The milled restoration is bonded to the tooth.

It only takes one visit, there are no impressions or temporaries, it is metal free, mercury is a nerve toxin, highly aesthetic, and is long lasting.

CEREC – treatment procedure means:

No conventional impressions

The CEREC 3D measuring camera scans the prepared tooth in just a few seconds. This eliminates the need for unpleasant silicone impressions.

No temporaries

CEREC restorations are milled out of a solid ceramic block in just a few minutes. They are then ready to be placed immediately. This eliminates the need for temporary fillings and crowns. It also means that you need only one appointment. And you don't have to wait for days on end until the ceramic filling is finished.

No long waiting periods

Because CEREC restorations can be placed immediately, you need only one appointment. And you benefit from tooth restorations which have demonstrated their durability time and time again.

The CEREC procedure in 5 easy steps

1. Before treatment begins we inform you about the benefits of CEREC.
2. After removing the decayed tissue or the defective amalgam filling we create a 3D image of the tooth with the aid of the CEREC camera.
3. The restoration is designed on the monitor of the CEREC acquisition unit.
4. The CEREC milling unit machines the restoration out of a ceramic block.
5. The milled restoration is bonded directly to your tooth.

Ceramic fillings with CEREC

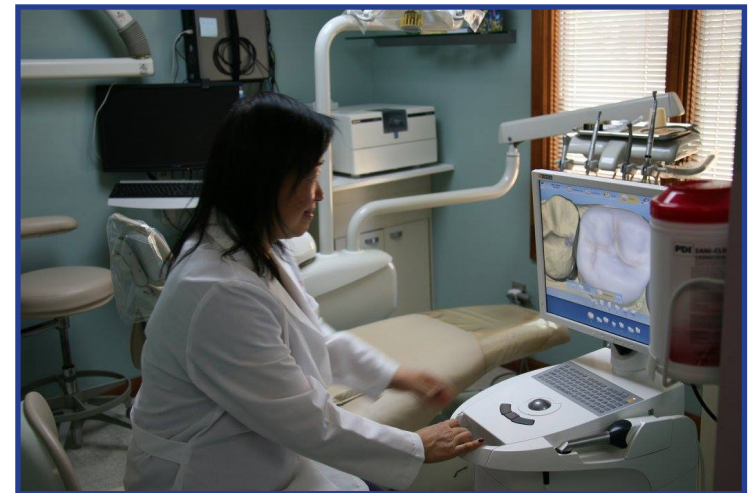

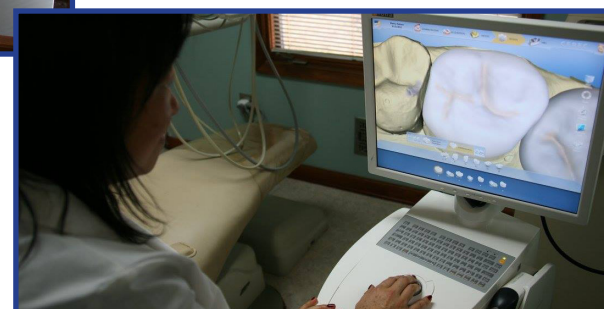

Do you want highly aesthetic, tooth-colored fillings – created and placed during a single visit?

Would you prefer not to have an impression and a temporary?

Do you prefer metal-free, biocompatible materials?

All of this is now possible. Thanks to CEREC. And these ceramic restorations can be placed during a single visit.

CEREC is a sophisticated CAD/CAM system for the production of all-ceramic inlays, onlays, partial crowns, veneers and crowns for anterior and posterior teeth.

All-ceramic restorations

- one visit
- no impressions
- no temporaries
- metal-free
- highly aesthetic
- long lasting

Modern CAD/CAM makes it possible
